## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 108-167 are allowed.
2. Claims 1-107 are cancelled.
3. The following is an examiner's statement of reasons for allowance:

The applicant's independent claims, claims 108, 135 and 162, have several similarities as well as differences with the prior art. Both the Applicant and prior art, particularly O'Connor et al. (US 5956815) and Herrington et al. (US 5189764), disclose a closure device comprising of interlocking fastening strips having first and second ends, said first end having a protrusion formed adjacent to a top portion thereof; a slider member movably installed upon the interlocking fastening strips, the slider member facilitating the occlusion of the interlocking fastening strips when moved towards the first end thereof. Further disclosed in the prior art is the slider member having a pair of spaced-apart side walls which are positioned on opposite sides of the interlocking fastening strips, an intermediate body portion between the side walls which are positioned upon the interlocking fastening strips, and a notch formed in said intermediate body portion. However, the prior art does not disclose that at least one of said notch or said protrusion having a pair of spaced apart contact surfaces which interact with and wedgingly engage respective contact portions of the other of said notch or protrusion to obstruct further movement of the slider member beyond said first end. The key aspect is the wedging engagement of said first end and the slider member. The prior art discloses plenty of end stops on similar closure devices, but

without the wedging aspect. Most of the end stops in the prior art simply function as barriers that do not wedgingly engage the slide member. Further, there is no motivation to modify the placement of the notch in Herrington et al., since placement of the Herrington notch within the slide member's intermediate body portion would not be possible since no surface appears to be available for a modified corresponding protrusion.

None of the other prior art references whether taken alone or used in combination cure the deficiency of O'Connor. Thus, the prior art as a whole made of record does not disclose or suggest the structural arrangement or the combination of structure set forth in Applicant's claims. As a result, the Examiner believes Applicant's claims as presented are patentably distinct from the prior art of record and the general prior art pertaining to slide members on closure devices.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
